GAZA SNS COMMUNITY PLATFORM

SUMMARY

The etymology of Community is 'common', which means to refer to general members who live in a specific area. The community is a positive communication through mutual free communication based on the purpose of creating an organic community (ecological system) for a better future by maintaining the system. The society where people live together is like a constellation of the universe. If one of them is born or lost, everything around them will be affected, so one will be and the ecosystem that moves the community can only have a big impact on all of its members. If community was created to target specific areas before 2000s, the community has been as the mobile market expands due to the development of the IT industry, people with common purposes are participating in the movement. A virtual network was formed by the activities, and a community with various purposes appeared.

DEVELOPMENT AND CHANGE OF ONLINE COMMUNITY IN KOREA

The modern community is being developed in a variety of ways, and every moment a new community is being created. We are not defining the current community concept as one, but as an organic community for a better future. On the premise that modern community formation process is examined, more fair and transparent community ecological system and to suggest a more fair and transparent community ecological system.

THE INITIATION OF ONLINE COMMUNITY

Domestic Online Community started in 1985 at PC Communication 1 Club and activated cafe service of Internet portal until it was angered, many communities in various services such as Chunlian, Haitel, Naunuri, and Unitel said "Until 1998, we worked in the name of.“

The club was divided into two parts: real space and online space in the old sex process of the net work ball body in the old-fashioned process of the network, and it is not other than entertainment or social contribution. The establishment of a club is about 20 to 30 promoters was necessary, and in the early days, the power of the shop was strong, but after that, it was decided through online elections. At that time, only communication was achieved through text due to the limitation of capacity, and the relationship between members was strengthened through events linked to reality such as Jungmo, Prompt meeting, Consumption, and Tools.

PC telecom company hightel image

1. Communication through PC. It is not a term that is naturally created, but a term intentionally created by an individual to emphasize the meaning of "PC" + "communication".
   The advocate of the term is Park Soon-baek, who was the vice president of the computer and the vice president of DreamWiz, and brought the name Pasocon Communications (パソコン通信) which was used in Japan.
   In the early 1990s, it was called 'Computer Communication' (Source: Tree Wiki))
2. Today as Union, online community / Ryu Seok-jin, Cho Hee-jung, Lee Hyun-ah 2016.

ACTIVATION OF ONLINE COMMUNITY

In 1999, the following started the industry's first web community, Cafe Service, which was launched by I Love School and Freechall. And then we started the service, from the PC communication era to the Internet-based portal cafe era Especially, this period is expanding to IT technology development and smartphone use speed, and the era of one-person community. As Naver grows into a large portal, it is the first generation Internet community that has 180,000 communities, the Freechall which was built in 2002, This is the case with the service fee issue, the right to forget, the right to self-information, the information transfer and data storage problem became a public issue.

THE PRIME OF ONLINE COMMUNITY

As of December 2007, the Internet utilization rate of teenage was 99.8%, in particular, 20 users are the center of the name, economy, IT, entertainment, humor, clothing / fashion, sports. The contents of the contents through the increase of professionalism, social participation, and loyalty of members rather than quantitative aspects production and distribution have developed into a space where it is difficult. The qualitative development of internet service expanded the scope of individual activities in community space. Solid individuals have been able to produce and distribute content, which has produced a lot of influenza. Especially, marketing through super influencer has become a necessary marketing tool for companies, and its effect is immediately and it was visible.

ONLINE COMMUNITY AND ECONOMY

Before the advent of SNS platforms and smartphones, traditional advertisers advertised, magazines, or printed materials and billboards, we have targeted large-scale audiences through centralized distribution channels. They used Jean actors, models, or public figures as their representative faces or brands, but especially with the emergence of mobile application SNS platforms such as Instagram, Facebook, Wechat and Snapchat. The distribution channel of the type increased and the result is that the new marketing agents such as "influencer."

The "Influencer 4" has been granted a prefectural position. These "Influencer 4" are massive followers of hundreds of thousands of SNS platforms. They have their own, and companies that want to promote their products or brands to their followers are paying off these "influencers". More recently, the marketing industry has been branding individuals with less than 1,000 small followers on social networks. He acknowledged that publicity is the same as "influencers" or more useful for brand promotion than these. This led to the rise of the "Nano Influencer 5." In short, what we found in this market was that people were not able to understand is the purchase of goods from people they know, which is increasingly dispersed in terms of sellers from the seller's perspective.

"Gaza.com" WEBSITE   GAZA WALLET   SNS Platform Alliance

BLOCKCHAIN COMMUNITY WEBSITE

COMMUNITY SITE ACTIVATION AND COMPENSATION

Everything in the blockchain The "Gaza.com" website is a collection of live information about major and various altcoins shared by members of the community, where professionals from various fields volunteer to provide advanced information community members freely discuss changes in real-time situations in the field and share information.

We offer a reward for the voluntary participation of these members. It contributes to the activation of the site such as simple attendance check, distribution of friend invitation link, installation and use of dedicated electronic wallet provides fair compensation to all users (community members); community members' activities are community members to expand and create a new community ecosystem by rewarding members' activities fairly and transparently through the Gaza Community Platform.

As the purpose of establishing a community, various people gather, share various contents, and bring positive synergy effects to all of them. "Gaza.com" is a member of the active activity by implementing the membership rating system. Upgrading the rating to allow for more benefits; in existing centralized communities, a minority will develop a decentralization platform that will ensure fair distribution of power and benefits that have been concentrated on the operators of , Hybrid rooms where more users can participate in the agreement until the complete decentralization live handwriting is completed before the complete decentralization of life.

VIRTUAL MONEY INFORMATION SHARING

"Gaza.com" community site provides real-time through domestic and foreign exchanges, coin market caps and API-linked services. We can provide market information and share information among members in a free debate space in the community. In addition, members can communicate in real time through SNS chat services. Community members can provide information.

We can use it for P2P transactions and OTC transactions between members; we can make cross-member transactions simple and convenient. We'll develop a Gaza Multi APP that can be used and distribute it to community members free of charge.

- Trading Limit
- Online, offline trading

GAZA COMMUNITY ECOSYSTEM

GAZA coins are used for a variety of purposes, in addition to distribution by reward programs provided to users of the GAZA community. GAZA coins will be listed on the exchange and will be used for transactions with other coins, and will be used as payment, entry, and withdrawal means through on-line trading platforms as well as GAZA community in the future.

GAZA COMMUNITY BLOCKCHAIN PLATFORM

GAZAWALLET distributed by GAZA Community is not free from the risk of hacking from the outside due to the nature of the Internet APP type electronic wallet. We separated the deposit server and the withdrawal server to protect the assets and information of GAZA community platform users and kept the assets of the employer in cold wallet.

Coin movements and transactions within are recorded in a decentralized distributed book that can not be modulated through the blockchain agreement algorithm process, which is real-time transactions within the limit of the Cold Wallet escrow account.
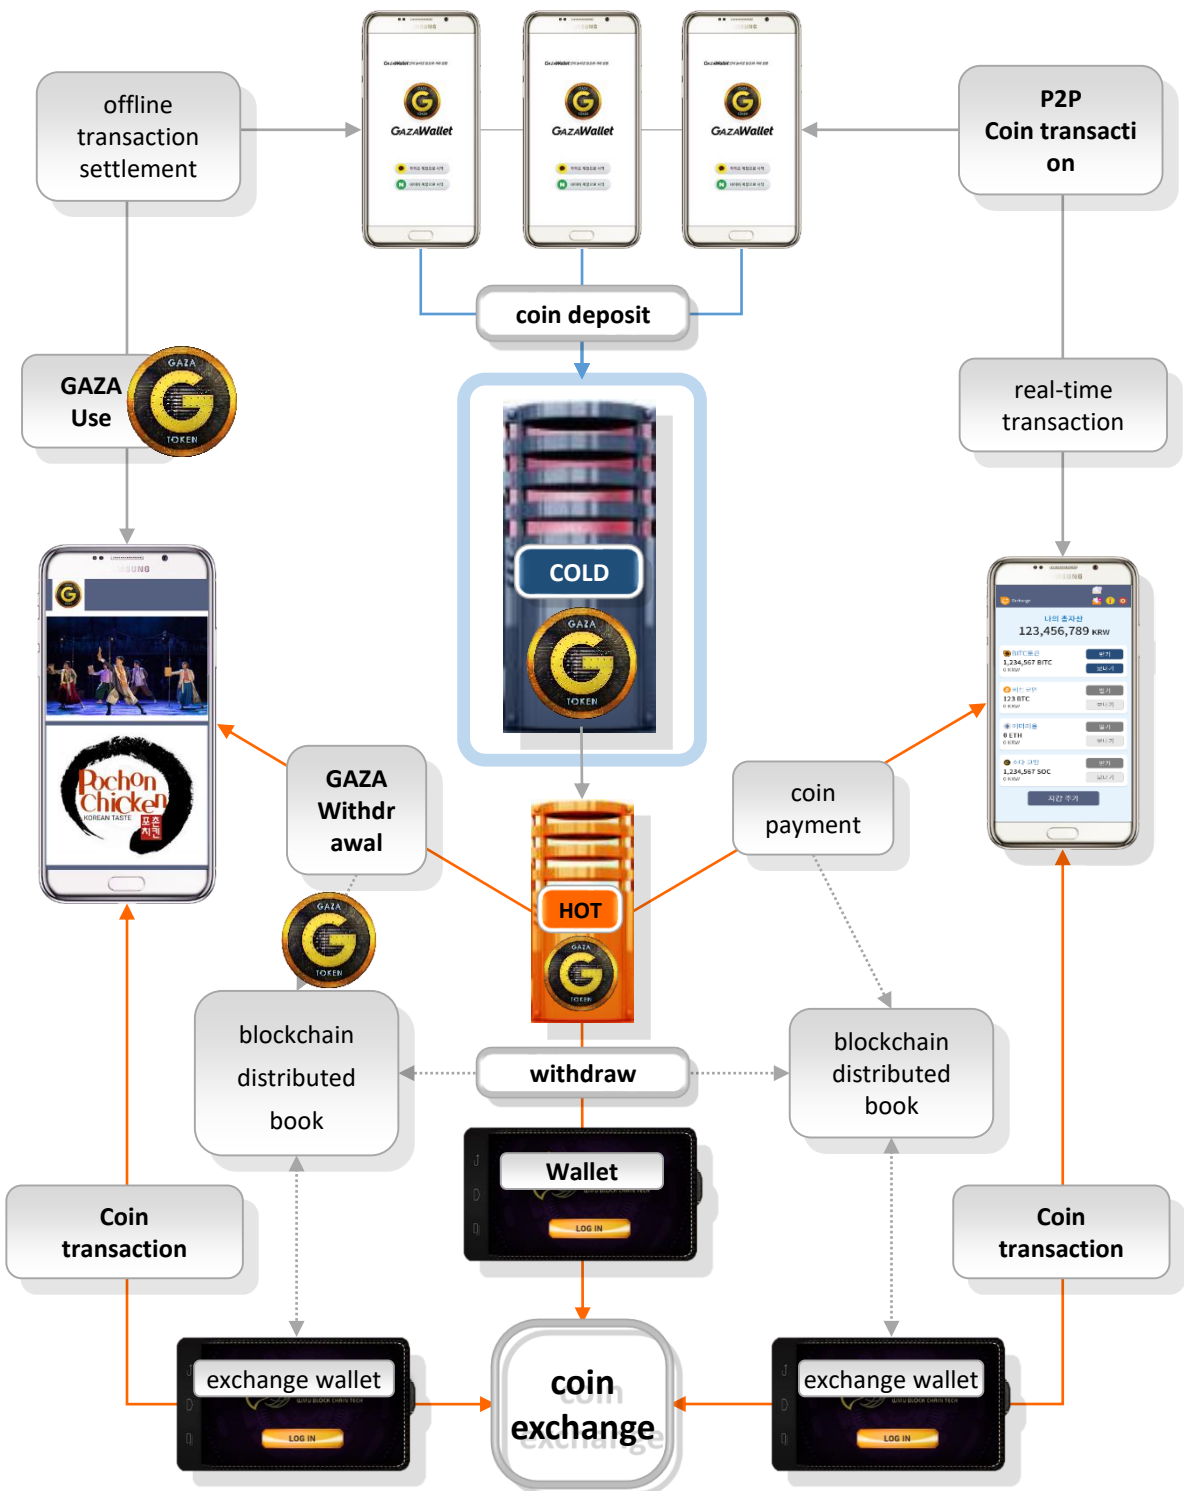

GAZA COMMUNITY MARKETING STRATEGY

GAZA Community will expand its user base and business area through differentiated services from other virtual currency communities for providing and sharing simple information. The GAZA Community's technical alliance will promote the integration of community with various information and members who want to promote their own projects, and will bring explosive expansion and synergy of loyal users in a short period of time.

1. SNS marketing through distribution and service of chat APP(chat, simple pin tech service, P2P contents transaction)
2. GAZA multi-electronic wallet service (safe complementation of various coins, API-linked service, convenient P2P transaction)
3. Technology alliance service for start-up company(personal)
   - Electronic wallet and coin development
   - Site development and community DB sharing
   - Developing an alliance platform for Altcoin exchange
   - Listing and IEO Consulting on Exchanges

GAZA WALLET ALLIANCE PLATFORM
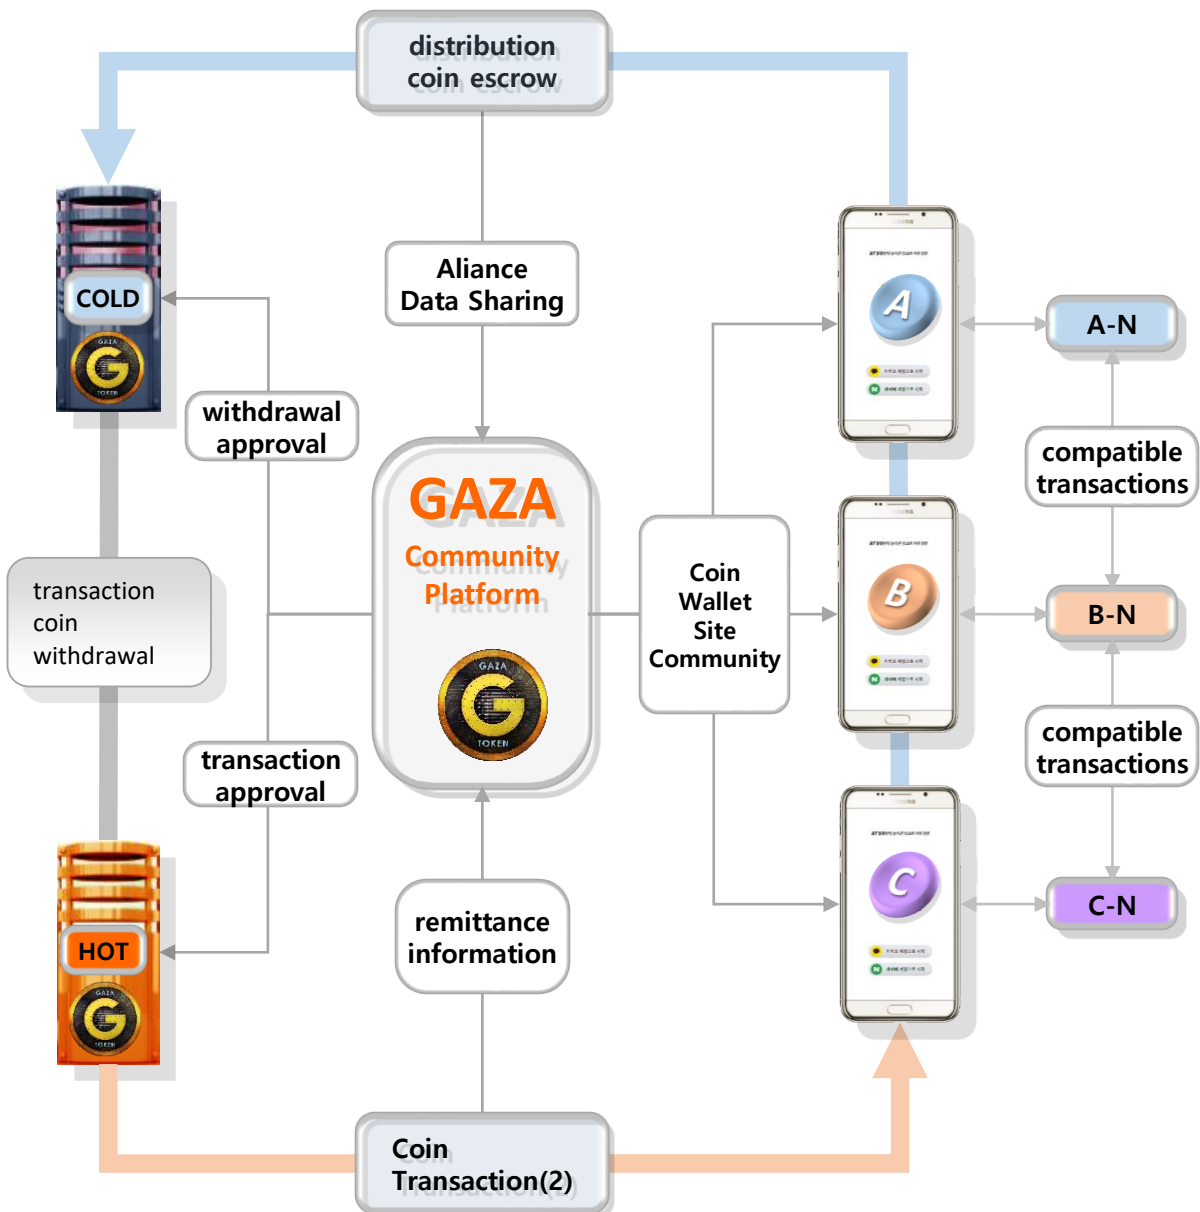

GAZA COIN ECONOMY

GAZA COIN?

The GAZA community is a space of sharing where anyone who is interested in virtual money can freely participate. GAZAWALLET, which can be easily used and distributed through SNSAPP, is available at the same time as installation.

Major coins and various altcoins can be safely stored in one GAZAWALLET, free of deposit and withdrawal, and GAZA community can be traded in real time through SNS between P2P in conjunction with API of the exchange, and new information can be obtained in real time through community. GAZA Community users receive coins as rewards in exchange for contributing to the expansion of the GAZA community through invitations to SNS friends and participation in events. We will issue GAZA coins, to pay for this. GAZA coins are registered on the public exchange, allowing users to exchange or sell cash with other cryptocurrencies, and store GAZA coins in GAZAWALLET and issue smart contracts as payment escrow services to ensure that funds are distributed safely and fairly.

Legal Notices

This white paper is not advice related to the sale of "GAZA" nor does it recommend the person who distributes and sells GAZA. In addition, the contents of this white paper, in whole or in part, can not be relied upon to make any contract or investment decisions.

"GAZA" did not meet the requirements as securities from certain jurisdictions.

I. This white paper does not meet the requirements of a securities issuance plan and is not a proposal or any document intended to encourage any jurisdiction to invest in securities, nor does it entail a binding legal commitment or contract to you based on this white paper, we do not require cryptography or any form of payment.

II. That any regulatory body has not reviewed or approved the information contained in this white paper, and that no action has been or has been taken by any law, regulation or regulation of any jurisdiction, nor that such disclosure or distribution or dissemination of this white paper Does not mean that it is in compliance with laws, regulations and regulations.

III. It is understood and interpreted or interpreted as the "GAZA" ICO is a good sign that the "GAZA" is traded on the commencement and completion of the ICO of this GAZA I can not.

IV. Where distribution or dissemination of any part or any copy of this White Paper is not prohibited by the laws, regulations, or regulations of the jurisdiction in which the parties reside and where possession of this white paper is restricted, Is in itself.

V. When you want to purchase "GAZA", the token can not be considered, interpreted or handled as follows
   1. Calls other than cryptocurrency
   2. Certificate of indebtedness, stock, a branch issued by an individual or organization(including token report, rights for a branch, options, derivative
   3. The units of collective investment products (units)
   4. Units of business trust (units)
   5. Derivatives of business trust units
   6. Other types of securities or securities

VI. This White Paper clearly declares that it is not responsible for any legal or financial obligations regarding the result of criminal and civil suit and the damage caused by it when such incident was caused by the purchase of an unqualified person, who is not a verified investor according to each country's standard for pre-sale of cryptocurrency, at a location that is not qualified for purchasing 'GAZA Coin'.

VII. Uncertainty of Regulation: Pre-sale, ICO, IEO, and all the sales of 'GAZA Coin' are carried out at a market where there is no regulation, so it can be an opportunity to make a standard and regulation to develop the market in the future. However, this also can be a risk because a regulatory organization would impose more legal controls over cryptocurrency asset, and this could be a risk to our business.

VIII. Product development: We are planning on distributing 'GAZA Coin' through a community platform service after 'GAZA Coin' is listed on the coin exchange market. Therefore, the coin value will be controlled by distribution through a coin exchange market without any practical distribution platform. This is what differentiates 'GAZA Coin' from other coin distribution structure. However, there would be multiple decision making process regarding platform development in the future. There may be a risk for a failure concerning the change of market environment.

IX. Time for Entering the Market: 'GAZA Coin' enters the market which at the moment does not have any competitor to prove the needs of customers. This can be an opportunity, but at the same time, a risk for us since the market may not be ready for a platform service like ours. This can affect the drop in coin price.
